

PROJECT MANAGEMENT ARTEFACTS

Our team follows scrum methodology for project management. The online tool [Trello](#) is used to keep track of development modules and their progress.

The team make use of a group created in social media to share interesting like to webpages with tutorials and research papers related to the project. The group chat is used to communicate between team members; this helps the team to organise team meeting sessions and keep the members updated.

The online tool [Ninjamock](#) is used to create prototype wireframes.

The sample wireframes and project management artefacts exported from Trello can be found on following pages.

Points	Story	Description
Product backlog		
	Frontend website	Web interface which allows the user to select a location, category of news and view trending news/tweets and videos related to the news
	Weather forecast	Get the weather forecast for the day for selected city
	Summarise news article	Instead of showing the entire article content, develop a module which summarises the news
	Wiki info	
	Country/location selection	
	Category selection	
	Article viewer	
Sprint Planning		
	Show trending news articles	
	Linking tweets with news articles	
	Filter tweets based on geolocation	
Sprint backlog		
	Youtube API	
	Show categories	
	Get tweets based on hashtags/keywords	
In Progress
